Halliburton  
Halliburton Open Jobs Positions  
Exploration, Geology and Geophysics

To Whom it may concern,

The reason for writing this letter is that I would like to be considered for a position in Halliburton. I have learned about this career opportunities at web and with friends that already work in the company ([Halliburton Job Reference](#))

I am a master certificated student. My main role in the area, in geophysics, is related to creation of models for sedimentary basins. In my master's work I have created interpreted a model of a 2D section of the Parana Intracratonic Sedimentary Basin using an innovative methodology with geological correlation. In the process, I have to learn and use programming language such as python, fortran 95, Octave, among others ([Program learning skills](#)).

I have, also, one year experience in geological field mapping and geophysical data acquisition as a field geology in National Observatory, Rio de Janeiro. I am interested in an institution that offers professional challenge and, above all, emphasis in continuous learning. In the case of Halliburton, these qualities apply. The chance to be part of such environment would be an incomparable experience. Furthermore, some of my published work can be found at my CV and my [published work's page](#).

I welcome the opportunity to discuss this position with you further and look forward to hearing from you. I am turning myself available for Skype interviews.

Thank you very much for your time.

Sincerely yours,

Victor Ribeiro Carreira
